

## SETTLEMENT

### KEY RULES AND PROCEDURES OF THE CORE(FR) PAYMENT SYSTEM

- June 2023 -

CORE uses the following Target-RTGS settlement procedures:

- Procedure B "Simultaneous multilateral settlement" (defined in the reference document BCE/2007/2) for the global clearing; a common guarantee fund can be activated in case of defaulting liquidities;
- Procedure E "Bilateral settlement" for the collection of individual guarantees when the debit balance exceeds the amount of the common guarantee fund.

For the settlement of the clearing balances:

#### Information period

As soon as the file is received, the Target-RTGS system sends an information message to all the Direct Participants and starts a period called "information" during which the Direct Participants have the possibility to provide its disagreement on transmitted Clearing Balances to STET. The disagreement cases are described in the procedures and in the reference documents.

#### Settlement period

At the end of this information period, the Target-RTGS system starts a period called “settlement” during which it performs the settlement of the Clearing Balances.

#### Settlement tracking

At the end of the settlement period, the Target-RTGS system issues an end status to the CORE system which then creates a spill tracking to the Direct Participants.
